Professional Summary

Information Technology Student with practical internship experience in software development and backend systems. Strong foundation in programming languages including Java, Python, and C#. Experience in building real-world projects through internships and academic work, and interest in building user-focused applications.

Education

Bachelor of Technology, Information Technology

Chandubhai S. Patel Institute of Technology (Charusat)

Expected May 2027

GPA: In progress

Diploma in Information Technology

Government Polytechnic Ahmedabad, Gujarat

2024

CGPA: 7.56/10.00

St. Xavier's CMI Public School, CBSE

2021

10th Grade: 80.2%

Technical Skills

Programming Languages: Java, Python, C#

Frameworks & Tools: Spring Boot, JavaFX, Unity Engine, .NET

Operating Systems: Windows, Red Hat Linux (Kali, CentOS)

Security & AI: Prompt Engineering, Secure Coding Practices

Platforms: Firebase, Facebook OAuth, Git, GitHub

Certifications

Red Hat System Administration I & II (RH124 & RH134)

2026

Red Hat Academy — Course Completion

Professional Experience

Airports Authority of India — Software Intern

July 2023 – Aug 2023

- Designed and implemented “BA-Project,” a .NET Windows application for breath-analyzer data management.
- Developed UI using WinForms and integrated Access database.
- Conducted testing to identify and resolve bugs and performance issues.

Abhedya Tech Services — Backend Intern

June 2025 – July 2025

- Worked on Spring Boot project; configured RESTful APIs and database models.
- Implemented Auth0 authentication and learned server-side security practices.

Projects

SentinelX (Ongoing)

2026

- Developed a real-time Windows process monitoring and threat detection system using C++, Win32 API, WPF, and C#.
- Implemented process analysis features including hidden process detection, digital signature verification, and heuristic-based risk scoring with a live cybersecurity dashboard.

CypherChain AI

2025

- Developing an AI-based supply-chain vulnerability scanner using Python.
- Implementing automated threat detection and secure data pipelines.

Dots and Boxes (JavaFX)

2024–25

- Developed a game with Firebase backend and Facebook OAuth login.
- Implemented real-time synchronization and client-server communication.

BA-Project (AAI Internship)

2023

- Built a .NET application to manage breath-analyzer testing for airport employees.
- Integrated Access database for real-time record management.
- Automated random employee selection for testing.

Career Objective

To begin my professional journey in a dynamic organization where I can utilize my technical skills in programming and application development, contribute to meaningful projects, and continuously expand my knowledge in emerging technologies.
